Sales Price	\$2,395.00

**Description**

This is our most economical high side utility landscape trailer in a full size axle, 2990# GVW. This is a great value for a small, entry level utility trailer for a homeowner type application. Ideal trailer for someone doing occasional use, around the house, equipment (ATV, garden tractor, or similar). Not recommended for commercial users (yes, we're talking to you, landscapers!). While it is our most economical, it does have some features others at this price point do not, including:

- Full 24" sides (some high sides are only 16-20" height, or a 3-board)
- Built in tie downs inside the trailer (Many don't, and without them there is no way to tie anything down with solid sides)
- Structural channel tongue (Some use angle iron, or formed C-channel)
- 2" A-frame coupler (not a 1 7/8")
- 4' Tube steel gate (Many use angle iron, which can't carry as much weight as it flexes more)
- A-frame tongue (not a single piece tongue, known to bend over time)
- A-frame jack (no A-frame tongue, no place for an A-frame jack, less chance of dragging/cutting wire harness)
- No wiring above the deck (We've fixed/replaced above deck wiring many times, not a good idea. A-frame wiring is in loom)
- E-Z lube hubs (Makes bearing maintenance a breeze, 10 minutes, 1 time a year...competitors often don't have these).
- Full size 15" radial tires (Not 13 or 14", bias, hybrid, etc)
- EZ Gate (Pinless gate removal...1 person, no tools required)
- Treated wood floor (not the mesh you sometimes see)
- Sandfoot on jack (doesn't allow it to sink into the dirt/gravel, etc. where you'd need to constantly lift out of the ground to hitch up)
