Description

This is our most economical 9990# GVW wood deck car hauler we offer. While it is our most economical, it does have some features others at this price point do not, including:

- \* Full wrap channel frame (some will stop at the first or second crossmember)
- \* 5" Channel tongue/frame (some use angle iron frames, less twist/flex in channel)
- \* 2' beavertail (better loading angle, some economy models are a straight deck limiting what you can load)
- \* Stacked 5" channel over channel tongue/frame (some use a single monoframe, which is lighter weight, and not as strong in the 6-7' between the front spring hangar and the front corner of trailer) where a stacked frame has twice the framing)
- \* Removable fenders (allows door to open on lower vehicles, side loading of material, and easier for replacement if needed)
- \* 15" 8-ply radial tires (not bias, or hybrid)
- \* 10 HD stake pocket tie downs D-rings (some only have 4 standard stake pockets, more tie downs = more flexibility)
- \* Forward adjusting brakes (Brakes self adjust forward, similar to a car, bringing added piece of mind)

- \* LED light upgrade (LED's are proven to last longer and be more visible)
- \* Fully adjustable ramps (ramps are able to load fully across the entire rear of the trailer, not just a portion of it. They can also be slid together for a single large ramp)
- \* 7000# drop leg jack (Some are using A-frame 2000# or swivel jacks. A drop leg are more durable, heavier duty, and can handle a loaded trailer being unhitched)
- \* E-Z lube hubs (Makes bearing maintenance a breeze, 10 minutes, 1 time a year).
